Key Findings

Customers

The platform suffers a major low Customer Repeat rate

94% of the customers ordered just once through Olist during a two-year period, despite more than 50% of orders having 5-star reviews

Reviews

Unhappy customers vent more in their reviews

1-star reviews are on average twice as long as 5-star reviews

Payments

Splitting payments is about vouchers

Just 1 in 99,440 orders was split across two real payment methods. The rest? Always vouchers.

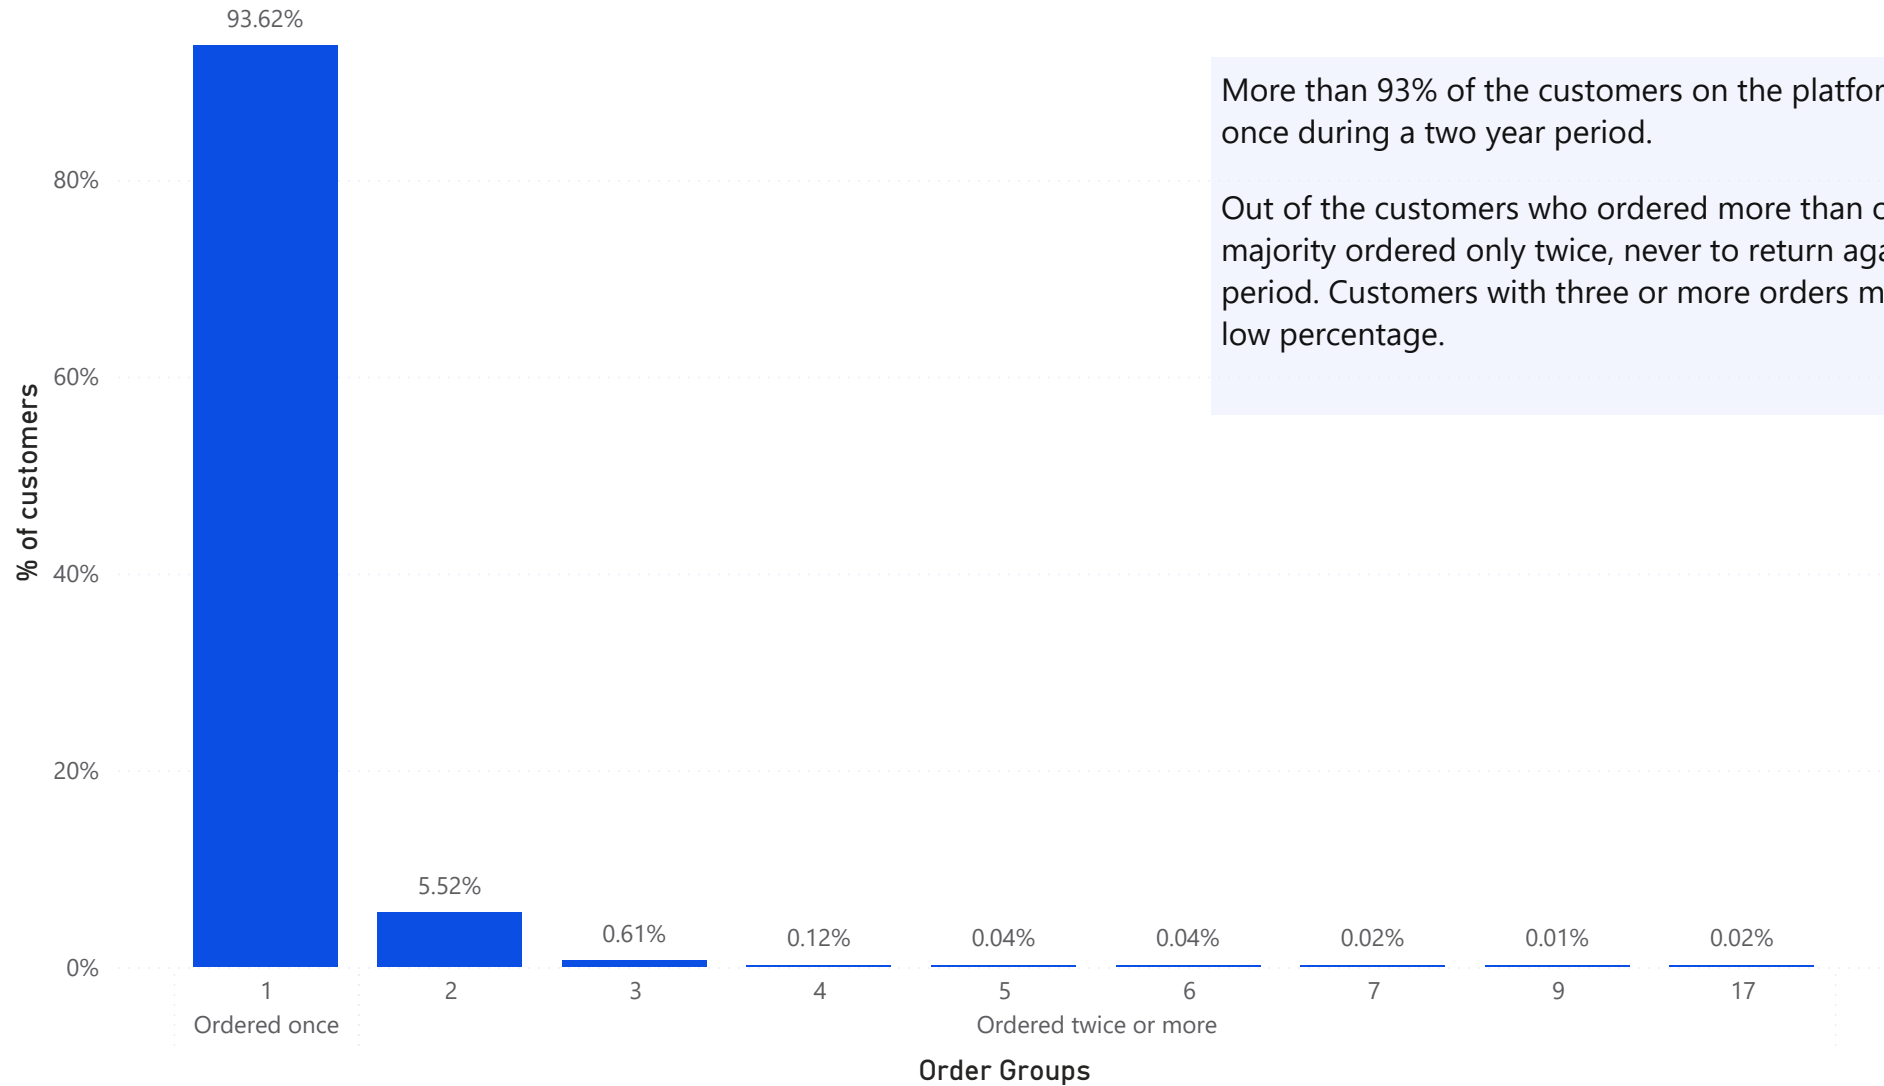

Payments

Bigger orders are spread over more installments

Average value of order rises with rising installments - though plans above 10 installments are rare

Orders Repetitions by Percentage

More than 93% of the customers on the platform ordered just once during a two year period.

Out of the customers who ordered more than once, the vast majority ordered only twice, never to return again during this period. Customers with three or more orders make up a very low percentage.
